

In conjunction with NuMED, we offer balloons made to custom specifications to meet the needs of unique patients. Please bear in mind that this is a very labor and time intensive process. Stock configurations should therefore be used when possible. This will allow faster turnaround time for cases that truly need balloons manufactured with unique parameters. For sterile product, a minimum delivery time of 6 weeks should be expected. For non-sterile product, a minimum delivery time of 4 weeks should be expected. Please also note that there are certain physical manufacturing constraints, and it is not always possible to build a balloon to every specification requested.
